ReplaceThis is a replacement file manager. It will allow you to quickly replace a file with any file of a similar name and extension. You can also disable and enable features from the right-click menu. It will also make it easy to replace a file with the contents of a folder. The purpose of this app is for the average user who is not familiar with hex editors and word processors. Note: This app uses DLL files to operate. If your desktop has suddenly become cluttered with icons you want to remove without having to right-click your way through all the icons, this utility is for you. "UnBeaImage" is not the most user-friendly utility, but it gets the job done. Unlike most programs of this kind, UnBeaImage lets you specify which icons you wish to remove. The program will also launch, but in order to open and close all the windows that UnBeaImage creates, you will have to use the taskbar. Right-Click Icons gives you the power to automatically replace and remove icons and shortcuts. It replaces icons, text and directories and removes unwanted icons from the desktop and each of the personal folders. The program is designed to automatically remove unwanted icons, text and directories. You can choose to remove or replace icons that are currently on the desktop or inside any folder. You can remove shortcuts or add new ones to the desktop or create a shortcut in any folder. Right-Click Icons provides a small program that will help you remove unwanted icons, text and directories. It will replace or remove icons, text and directories. It works in addition to the standard right-click menu. The appearance of the tool can be customized. I have this for a nav bar where I am trying to include a theme-file in the nav.php. I have heard that if you have a include statement and you want to use variables that the php need to be set to use register\_globals. If I set the variables at the top of the file, it works. If I set it in the include statement in nav.php it does not. Is there any other way I can use that variable in the include statement? top of file: header.php file: nav.php file: asset.php file: registerNamespaces(array( 'Graphic' => \_\_DIR\_\_ .
