Draw a path around a rectangle and select or deselect blocks in AutoCAD 2023 Markup Assisted Drawing and Dynamic Markup Draw a path around a rectangle, and then draw new blocks over it and select/deselect them automatically. No additional steps. These are known as Dynamic Block Markups, as you can quickly change the block properties without the blocks appearing on screen. You can also add or change blocks in-place without creating a new drawing file. (video: 1:12 min.) Use Dynamic Block Markups to incorporate feedback or easily change the drawing, without changing the drawing file or switching to another tool. (video: 1:07 min.) You can modify any block on your drawing with Dynamic Block Markups, including shapes, symbols, and text. You can also add line styles to paths or blocks. (video: 1:26 min.) Use Dynamic Block Markups to incorporate feedback from printed paper or PDFs, and then click on the "Send this markup" button to automatically add changes to your drawing. The use of Dynamic Block Markups is similar to the use of Dynamic Input Markups. Dynamic Input Markups automatically change the input that other users see or change the input that they see. The Dynamic Block Markups "adjust the drawing by changing the block properties," in effect modifying the appearance of the blocks. (video: 1:20 min.) You can also apply Dynamic Block Markups to groups, on multiple drawings, and on the command line. You can also create Dynamic Block Markups without the use of text and symbols. (video: 1:22 min.) With the Dynamic Block Markups, you can create and change block properties, whether the block is in your current drawing or is a separate drawing. The properties change in the current drawing. The Dynamic Block Markups are similar to Dynamic Input Markups, and can be used with and without symbols, text, and print. (video: 1:32 min.) Draw a rectangle and change the color of one of the corners with a Dynamic Block Markup Markup Wizard Save time and create block markup efficiently. AutoCAD 2023 includes a wizard-driven process to quickly create block markup. The result is an AutoCAD drawing file with fully selected blocks in place. (video: 1:27 min.)
